Summary

Unity Lead Game Developer with 7+ years of experience shipping and operating live mobile games at scale. Strong focus on performance optimization, scalable gameplay systems, and data-driven development. Hands-on ownership of full production cycles, live updates, A/B testing, and post-release stability across Android and iOS.

Experience

EVL PPY

Oct 2020 – Present

Role Summary:

Led the development and live operations of large-scale mobile simulation games with millions of downloads across Google Play and App Store. Owned core gameplay systems, performance optimization, tooling, and live-service integrations while overseeing release cycles, experimentation, and post-launch stability.

- Led end-to-end development of live mobile titles, from production through release, updates, and long-term live operations.
- Designed and implemented core gameplay and technical systems, including vehicle mechanics, camera systems, modular gameplay features, and runtime lighting solutions.
- Built custom editor tools and internal pipelines to improve development efficiency and reduce iteration time.
- Profiled and optimized CPU, GPU, and memory usage to maintain smooth performance on low- and mid-end mobile devices.
- Planned, executed, and analyzed A/B tests using Firebase, validating gameplay and feature changes with real user data.
- Prepared and released production updates, monitoring post-release stability through analytics and crash reporting, and driving rapid fixes when needed.
- Integrated and maintained Firebase services (analytics, events, crash reporting, remote configuration) to track player behavior and system health.
- Led technical decisions for core systems and asset management, including Addressables and runtime asset and lightmap handling, in collaboration with the art team.
- Coordinated feature delivery, hotfixes, and updates to ensure smooth releases and reliable live operations.
- Collaborated closely with designers, artists, and stakeholders to maintain quality, scalability, and long-term maintainability.

TractorSetGo

May 2018 – Oct 2020

Role Summary:

Contributed to the development of multiple game projects and prototypes across different genres, focusing on gameplay systems, AI, UI/UX, and production-ready code.

- Designed and implemented gameplay mechanics, AI behaviors, and user interfaces with an emphasis on player experience and polish.
- Collaborated with artists to integrate assets and ensure visual and technical consistency.
- Developed and maintained C# codebases using version control and structured software engineering practices.
- Built prototypes and MVPs to validate gameplay concepts and support production decisions.
